

## Package leaflet: Information for the user

### Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe

rocuronium bromide

**Read all of this leaflet carefully before you start using this medicine because it contains important information for you.**

- Keep this leaflet. You may need to read it again.
- If you have any further questions, ask your doctor or pharmacist.
- If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. See section 4.

#### What is in this leaflet

1. What Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe is and what it is used for
2. What you need to know before you use Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe
3. How to use Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe
4. Possible side effects
5. How to store Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe
6. Contents of the pack and other information

#### 1. What Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe is and what it is used for

*Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe* is a muscle relaxant used in adults and children from 2 years of age. Muscle relaxants are used during a surgical procedure to assist in general anaesthesia. During a surgical procedure, your muscles must be completely relaxed. This makes it easier for the surgeon to perform the surgical procedure. Normally, the nerves send signals to your muscles. *Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe* can temporarily block these signals, thereby causing your muscles to relax. Because the muscles needed for breathing also relax, you will be given artificial *respiration until you can breathe on your own* again. During the surgical procedure, the effect of the muscle relaxant will be constantly monitored and, if necessary, you will be given some more *Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe*. At the end of surgery, the effects of *Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe* are allowed to wear off and you can start breathing on your own. Sometimes, another medicine will be given to speed up this recovery. *Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe* can also be used in intensive care.

#### 2. What you need to know before you use Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe

**You must not be given Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe**

- if you are allergic to rocuronium or any of the other ingredients of this medicine (listed in section 6).

**Tell your doctor if this applies to you.**

#### Warnings and precautions

Your medical history can affect the way in which you are given *Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe*. Tell your doctor if you have, or have ever had, the following:

- an allergy to muscle relaxants
- poor kidney function (renal impairment) or kidney disease
- a cardiovascular disease

- oedema formation (fluid accumulation, e.g. on your ankles)
- liver disease, gallbladder or bile duct disease or poor liver function
- diseases affecting the nerves and muscles
- history of malignant hyperthermia (sudden fever with rapid heartbeat, rapid breathing and stiffness, pain and/or weakness in your muscles).

Some medical conditions may affect the way *Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe* works. For example:

- low potassium levels in the blood (hypokalaemia)
- high magnesium levels in the blood (hypermagnesaemia), e.g. when treating toxemia of pregnancy with magnesium salts
- low calcium levels in the blood (hypocalcaemia)
- low protein levels in the blood (hypoproteinaemia)
- lack of fluids (dehydration)
- too much acid in the blood (acidosis)
- too much carbon dioxide in the blood (hypercapnia)
- general weak condition
- being overweight
- burns

If any of these conditions apply to you, your doctor will take this into account when deciding on the right dose of *Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe* for you.

### **Children/ and adolescents**

Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe can be used in children (2 – 11 years) and adolescents (12 – 17 years). However, maintenance dosage is not indicated in paediatric population under 12 years of age.

Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe should not be given to children under 2 years because the subgraduation of the pre-filled syringe does not allow an accurate administration of the product in these populations.

### **Other medicines and Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe**

Tell your doctor if you are using, have recently used or might use any other medicines. This will help your doctor determine the right dose of *Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe* for you.

The following medicines may influence the effect of *Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe*:

Medicines which increase the effect of *Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe*:

- certain anaesthetics
- medicine used to relax muscles (suxamethonium)
- certain medicines used to treat bacterial infections (antibiotics)
- certain medicines used for manic depressive illness (lithium)
- certain medicines for heart disease or high blood pressure (quinidine, calcium channel blockers, beta-blockers)
- certain medicines used to treat malaria (quinine)
- water tablets (diuretics)
- magnesium salts
- local anaesthetics (lidocaine and bupivacaine)
- short-term use of medicines for epilepsy (phenytoin), e.g. during surgery.

Medicines which decrease the effect of *Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe*:

- long-term use of corticosteroids (anti-inflammatory medicines) or medicines for epilepsy (phenytoin and carbamazepine)

- medicines for pancreatitis, problems with blood clotting and acute blood loss (protease inhibitors: gabexate, ulinastatin)
- Calcium chloride, potassium chloride.

Medicines with a variable effect on Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe:

- other medicines used to relax the muscles.

Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe may influence the effect of the following medicines:

- The effect of local anaesthetics (lidocaine) may be increased.

### **Pregnancy, breast-feeding and fertility**

If you are pregnant or breast-feeding, think you may be pregnant or are planning to have a baby, ask your doctor for advice before you are given this medicine.

There are very limited data on the use of rocuronium bromide during human pregnancy and no data on breast-feeding women. Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe should only be given to pregnant and nursing women when the doctor decides that the benefits outweigh the risks.

This medicine may be given during Caesarian section.

### **Driving and using machines**

Your doctor will tell you when you can resume driving or using dangerous machines after the use of Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe.

### **Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe contains sodium**

This medicine contains less than 1 mmol sodium (23 mg) per pre-filled syringe, i.e. essentially 'sodium free'.

## **3. How to use Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe**

### **Dosage**

Your doctor will determine the dosage of Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe, based on:

- which type of anaesthetic is used
- the expected length of the surgical procedure
- other medicines you are using
- your age and state of health.

You will be given Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe before and/or during a surgical procedure by a healthcare professional. The normal dose is 0.6 mg rocuronium bromide per kilo of body weight and the effect lasts 30 to 40 minutes. During the procedure, it will be checked whether Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe is still working. You will be given additional doses, if needed.

### **How Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe is given**

Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe is not intended for self-administration. Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe will be injected as a solution into a vein. It will be given by a single injection or via an infusion.

### **If you use more Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe than you should**

As the medical staff will be monitoring your condition carefully, it is unlikely that you will be given too much Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe. However, if this

happens, artificial respiration will be continued until you can breathe again on your own. It is possible to counter the effects of (too much) Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe and speed up your recovery, by giving you a medicine that counteracts the effects of Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe.

#### **4. Possible side effects**

Like all medicines, this medicine can cause side effects, although not everybody gets them. If these side effects occur during anaesthesia, they will be seen and treated by your doctor.

The following side effects may occur:

##### **Uncommon/rare (may affect less than 1 in 100/1,000 people)**

- rapid heartbeat (tachycardia)
- low blood pressure (hypotension)
- Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe has no effect, or is too effective or not effective enough
- pain at the injection site
- redness or itching at the injection site
- prolongation of the muscle-relaxant effect of Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe
- delayed recovery from anaesthesia

##### **Very rare (may affect less than 1 in 10,000 people)**

- allergic reactions, such as breathing difficulties, changes in blood pressure or heart rate, shock (sharp drop in blood pressure) due to insufficient circulating blood, or skin changes (e.g. fluid accumulation, redness or rash)
- excessive and prolonged contraction of the airway muscles causing breathing difficulty (bronchospasm)
- muscle weakness or paralysis
- sudden fluid accumulation in the skin and mucous membranes (e.g. throat or tongue), breathing difficulties and/or itching or rash, often as an allergic reaction (angioedema)
- fluid accumulation (oedema) in the face
- airway problems due to the anaesthetic
- rash, sometimes with severe itching and whealing (hives or urticaria)
- skin redness
- flushing

##### **Not known (frequency cannot be estimated from the available data)**

- severe allergic coronary blood vessels spasm (Kounis syndrome) resulting in chest pain (angina) or heart attack (myocardial infarction)

#### **Reporting of side effects**

If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. You can also report side effects directly via Yellow Card Scheme

Website: [www.mhra.gov.uk/yellowcard](http://www.mhra.gov.uk/yellowcard) or search for MHRA Yellow Card in the Google Play or Apple App Store

By reporting side effects you can help provide more information on the safety of this medicine.

#### **5. How to store Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe**

Keep this medicine out of the sight and reach of children.

Do not use this medicine after the expiry date which is stated on the label, blister and carton.

Store in a refrigerator (2 °C – 8 °C).

Do not freeze.

Keep the pre-filled syringe in its unopened blister until use.

After opening, the medicinal product must be used immediately.

This medicine may be stored for a short period at temperatures not exceeding 30°C for a period of maximum 12 weeks.. In all cases, once initially removed from refrigerated storage, the medicine should be discarded after 12 weeks. The product should not be placed back into the refrigerator once it has been kept outside. The storage period must not exceed the shelf-life.

Do not use this medicine if you notice visible signs of deterioration.

Any pre-filled syringe, even partially used, should be discarded appropriately after use.

Do not throw away any medicines via wastewater. Ask your pharmacist how to throw away medicines you no longer use. These measures will help protect the environment.

## **6. Contents of the pack and other information**

### **What Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe contains**

- The active substance is rocuronium bromide.  
Each mL of solution contains 10 mg rocuronium bromide.  
Each 5 mL pre-filled syringe contains 50 mg rocuronium bromide (50 mg/5 ml).
  
- The other ingredients are sodium acetate trihydrate (E 262), sodium chloride, acetic acid glacial (E260) and water for injections.

### **What Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe looks like and contents of the pack**

Rocuronium bromide 10 mg/ml solution for injection in pre-filled syringe is a clear colourless to pale brown-yellowish solution for injection or infusion, in a 5 mL polypropylene pre-filled syringe, with a graduated self- adhesive transparent label (sub - graduations of 0.2 mL from 0 until 5 mL). Each pre-filled syringe is individually packed in a transparent blister pack.

Package size: Cardboard boxes of 10 pre-filled syringes.

### **This leaflet was last revised in**

December 2023

-----  
The following information is intended for healthcare professionals only:

The pre-filled syringe is not suitable for accurate administration of the product in children younger than 2 years of age

The pre-filled syringe is for single patient only. Discard syringe after use. Do not reuse.

### Aspect of the solution

The product should be inspected visually for particles and discoloration prior to administration. Only a clear colourless to pale brown-yellowish solution free from particles or precipitates should be used.

### Incompatibilities of the solution

Rocuronium bromide is physically incompatible with solutions of the following medicinal products: amphotericin, amoxicillin, azathioprine, cefazolin, cloxacillin, dexamethasone, diazepam, enoximone, erythromycin, famotidine, furosemide, hydrocortisone sodium succinate, insulin, methohexital, methylprednisolone, prednisolone sodium succinate, thiopental, trimethoprim and vancomycin. Rocuronium bromide is also incompatible with intralipid.

### Use of the pre-filled syringe

The content of an un-opened and un-damaged blister is sterile, and the blister must not be opened until the syringe is ready to be used.

The pre-filled syringe is for single patient only. Discard syringe after use. Do not reuse.

The pre-filled syringe is not suitable for accurate administration of the product in children younger than 2 years of age

The product should not be used if the tamper evident seal on the syringe is broken.

Do not use this medicine if you notice visible signs of deterioration.

#### ***Please prepare the syringe carefully as follows***

The external surface of the syringe is sterile until the blister is opened. The blister must not be opened until use.

When handled using an aseptic method, this medicine can be placed on a sterile field once it has been removed from the blister.

1) Withdraw the sterile pre-filled syringe from the blister.

2) Push on the plunger to free the bung. The sterilisation process may have caused adhesion of the bung to the body of the syringe.

3) Twist off the end cap to break the seal. Do not touch the exposed luer connection in order to avoid contamination.

4) Check the syringe seal tip has been completely removed. If not, replace the cap and twist again.

5) Expel the air by gently pushing the plunger.

6) Connect the syringe to the vascular access device use a luer/luer lock system. Push the plunger slowly to inject the required volume. Administer the product according to the suitable administration route

The pre-filled syringe is not suitable for syringe pump drivers. The pre-filled syringe is a ready to administer product, it is not suitable for dilution in an infusion pouch.

Any syringe that has been damaged or has been handled without respecting the conditions of sterility must not be used.

Any unused product or waste material should be disposed of in accordance with local requirements.
