## **PATIENT ALERT CARD**

Duchenne muscular dystrophy

Name:

---

Date of birth:

---

NHS number:

---

Emergency contact:

---

AGAMREE must be taken as prescribed and never omitted or discontinued. Missed doses, illness or surgery can cause adrenal crisis requiring emergency treatment.

This patient is on long term treatment with AGAMREE (vamorolone), a dissociative corticosteroid for the chronic treatment of Duchenne Muscular Dystrophy, and therefore is physically **DEPENDENT** on daily steroid therapy as a critical medicine.

If this patient is unwell (excess fatigue, unexpected weakness, vomiting, diarrhea, dizziness, or confusion), acute adrenal insufficiency or crisis must be taken into consideration.

Acute adrenal crisis is an **EMERGENCY** and requires urgent medical attention by calling 999 or attending a hospital emergency department.
